

StudentMain.java

```
1 import java.util.ArrayList;
2 public class StudentMain {
3     public static void main(String [] args) {
4         ArrayList<Student> roster = new ArrayList<Student>();
5         roster.add(new Student("Chris",3456789,"CMPSC"));
6         roster.add(new Student("Taylor",1234567,"MATH"));
7         roster.add(new Student("Sandy",5678901,"CMPEN"));
8         java.util.Collections.sort(); // sort by perm number
9         System.out.println(roster);
10    }
11 }
```

Handout A, p. 2

class java.util.ArrayList<E>

The following excerpts from the javadoc for java.util.ArrayList<E> may be helpful to you in completing this exam.

Inheritance Hierarchy (complete)

```
java.lang.Object
  java.util.AbstractCollection<E>
    java.util.AbstractList<E>
      java.util.ArrayList<E>
```

All Implemented Interfaces:	Serializable, Cloneable, Iterable<E>, Collection<E>, List<E>, RandomAccess
Direct Known Subclasses:	AttributeList, RoleList, RoleUnresolvedList

Constructors (complete)

ArrayList()	Constructs an empty list with an initial capacity of ten.
ArrayList(Collection<? extends E> c)	Constructs a list containing the elements of the specified collection, in the order they are returned by the collection's iterator.
ArrayList(int initialCapacity)	Constructs an empty list with the specified initial capacity.

Most important methods, with brief description

boolean	add(E e)	Appends the specified element to the end of this list.
void	add(int index, E element)	Inserts the specified element at the specified position in this list. Shifts the element currently at that position (if any) and any subsequent elements to the right (adds one to their indices). throws IndexOutOfBoundsException if (index < 0 index > size())
void	clear()	Removes all of the elements from this list.
E	get(int index)	Returns the element at the specified position in this list.
int	indexOf(Object o)	Returns the index of the first occurrence of the specified element in this list, or -1 if this list does not contain the element.
boolean	isEmpty()	Returns true if this list contains no elements.
int	lastIndexOf(Object o)	Returns the index of the last occurrence of the specified element in this list, or -1 if this list does not contain the element.
E	remove(int index)	Removes the element at the specified position in this list.
boolean	remove(Object o)	Removes the first occurrence of the specified element from this list, if it is present.
E	set(int index, E element)	Replaces the element at the specified position in this list with the specified element. Returns the element previously at the specified position throws IndexOutOfBoundsException if (index < 0 index >= size())
int	size()	Returns the number of elements in this list.
void	sort(Comparator<? super E> c)	Sorts this list according to the order induced by the specified Comparator.

Additional methods, listed by method signature only.

boolean addAll(Collection<? extends E> c)	boolean addAll(int index, Collection<? extends E> c)
Object clone()	boolean contains(Object o)
void ensureCapacity(int minCapacity)	void forEach(Consumer<? super E> action)
Iterator<E> iterator()	ListIterator<E> listIterator()
ListIterator<E> listIterator(int index)	boolean removeAll(Collection<?> c)
boolean removeIf(Predicate<? super E> filter)	protected void removeRange(int fromIndex, int toIndex)
void replaceAll(UnaryOperator<E> operator)	boolean retainAll(Collection<?> c)
Splitter<E> splitter()	List<E> subList(int fromIndex, int toIndex)
Object[] toArray()	<T> T[] toArray(T[] a)
void trimToSize()	

Methods inherited from:

class java.util.AbstractList	equals, hashCode
class java.util.AbstractCollection	containsAll, toString
class java.lang.Object	finalize, getClass, notify, notifyAll, wait, wait, wait
interface java.util.List	containsAll, equals, hashCode
interface java.util.Collection	parallelStream, stream
